The need for performance measurements arises at various stages of development, design and production from different requirement~: at the development level, the main objective is to as~ess the performance of a new concept in comparison with state-of-the-art competitors; at the design level, performance data are required as input for the ~izing and dimensions of photovoltaic ~y~tem~ operating under certain environmental conditions; at the produc tion level, the cells and modules must be acceptance te~ted against a set of specifications in order to separate deliverables from reject~. For accurate performance measurements and calibration, several methods exist which can be generally categorised into two clas~e~: outdoor methods in natural sunlight, and indoor method~, u~ing ~imulated ~unlight or indirect analytical method~. Depending on the purpose of a performance test, each of these method~ can offer specific advantage~. Therefore, the various methods are not to be looked at as competing, but rather as complementary tool~ for the achievement of accurate electrical performance measurement~. | Measurement and Analysis of Solar Radiation Data.- Measurement and Analysis of Solar Radiation Data.- Thermal Collectors.- Solar Thermal Collectors.- Performance Test Procedures for Thermal Collectors: Outdoor Testing.- Performance Test Procedures for Thermal Collectors: Solar Simulators.- Photovoltaic Converters.- Photovoltaic Energy Converters.- Performance Test Procedures for Solar Cells and Modules.- Solar Cell and Module Performance Assessment Based on Indoor Calibration Methods.- Method for a Reliability Study on Photovoltaic Modules-Application for the Qualification of Cells and Modules.-...
