RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 56 pages. Original publisher: Stanford, Calif. : Edward L. Ginzton Laboratory, W. W. Hansen Laboratories of Physics, Stanford University ; Washington, D. C. : National Aeronautics and Space Administration, 1990 OCLC Number: (OCoLC)62199677 Excerpt: . . . lasersandpotassiumdihydrogenphosphate 2 haveyieldedthevalued $d_{36}(\text{KDP}) = 0.39 \text{ pm V}$, which has become accepted in the application of high-power harmonic conversion for fusion research 3. Earlier cw measurements of 633-to 316-nm harmonic generation in ammonium dihydrogen phosphate gave a value of $d_{36}(\text{ADP}) = 0.57 \text{ pm V}$ 4, 5. Combining this with relative measurements between KDP and ADP yields $d_{36}(\text{KDP}) = 0.41 \text{ pm V}$ 6. We measured $d_{36}(\text{KDP}) = 0.38 \text{ pm V}$ in good agreement with both earlier harmonic measurements. Values for $d_{36}(\text{KDP})$ determined by the technique of parametric fluorescence 7, 8 tend to be higher. Previously the value for 1.06 μm to 532 nm harmonic generation in lithium iodate $d_{31}(\text{LiIO}_3) = 7.1 \text{ pm V}$ based on parametric fluorescence has been accepted as standard 9. (No attempt was made to measure signs of the nonlinear coefficients, however when the signs are known 6 they are included.) On the parametric fluorescence LiIO_3 scale, the coefficient for potassium dihydrogen phosphate is $d_{36}(\text{KDP}) = 0.63 \text{ pm V}$ for second harmonic generation pumped by 1.06 μm radiation 7. Clearly there is a discrepancy in the accepted values for nonlinear optical coefficients. The crystals included in the measurements reported here are KDP, LiIO_3 , BaB_2O_7 , potassium dideuterium phosphate ($\text{K}_2\text{P}_2\text{O}_7$), potassium titanyl phosphate (KTP), and magnesium oxide doped lithium...
