Nova Science Publishers Inc. Paperback. Book Condition: new. BRAND NEW, Adaptive Mechanisms in Migraine: A Comprehensive Synthesis in Evolution -- Breaking the Migraine Code, Vinod Kumar Gupta, Migraine has evolved into a giant puzzle and its literature comprises a vast loosely-linked enterprise challenging human problem-solving capacity. There is no central idea in migraine to elaborate a general theory which in turn could ultimately lead to creation of a unifying hypothesis that collects the various strands of evidences into a coherent and logically defensible intelligible synthesis. Current pathogenetic concepts of migraine, in particular cortical spreading depression (CSD), do not focus on the precise onset of the attack. Neither the aura nor the headache represents the true beginning of a migraine attack. The primary or causal physiological alteration underlying migraine lies in the 'pre-prodromal' phase, the variable interim between exposure to the headache-provoking stimulus or situation and the onset of the migraine prodrome. The migraine prodrome itself can last several hours to a few days. Since CSD is believed to underlie both the migrainous scintillating scotoma as well as the headache, it cannot be regarded as an early or initial 'pre-prodromal' physiological event. The biology of migraine is not the study of laboratory 'markers' but the elucidation of physiological forces (trait and/or state factors) that push (precipitate) or pull (predispose) patients towards aura/headache or aura/headache-free state. The pathophysiology of migraine has been hitherto confined to analyses of diverse precipitating and remitting factors and uncertain postulations about recorded laboratory aberrations into presumptive causal algorithms. The key cranial physiological system involved in migraine remains unidentified. Migraine attacks occur during stress and, more commonly, after cessation of stress. The author has earlier proposed that a physiological neuroendocrine 'system' comprised of well-regulated parallel activation of the vasopressinergic, intrinsic brain serotonergic, and intrinsic brain noradrenergic systems constitutes...
