The book is intended to augment the standard textbooks and orthodox methods of study. Here and there modifications of the views in common acceptance are suggested; but there is no desire to supplant or alter them, except where fallacies are exposed - as, for example, in the extraction of roots, and in Imaginary Quantities. The desire is much more to bring about a change of attitude towards mathematics than to propose methods which shall merely be different from those in use - to show the thing as an actual, tangible reality, instead of as a collection of rigid and unrelated rules and formulae; and to persuade students to touch and handle it for themselves with confidence and understanding, instead of regarding it from afar as some rather awful and totally incomprehensible abstraction. It is felt that there is pressing need for the adoption, by all concerned, of a different standpoint from which mathematics may be regarded by those who require it and depend upon it as a part of their working equipment; so that the subject may be studied and practised throughout in the light of simple and straightforward human reality.
