Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Applied Aeronautics: The Airplane Today the subject of aeronautics appeals to nearly everyone, due largely to the wonderful progress which has been made in the development and utility of the airplane since the beginning of the war. Although the airplane is among the most important features of modern warfare, yet there are comparatively few comprehensive texts which the beginner in aviation can readily understand. In many cases the student aviator and the aero mechanic have had but a limited technical training nor have many of them been specially trained in mathematics, particularly in the higher branches. Therefore, many of the present-day text-books on aeronautics, which the aeronautical engineer would consider quite elementary, are very difficult for the beginner. Realizing the difficulty under which the beginner labors, the Airplane Engineering Department felt that an elementary course in applied aeronautics and practical aviation was needed, and has brought forth this volume with the hope of filling this need, primarily for the instruction of the men at McCook Field. This book, however, is not intended as a text on the design 6 fairplanes, but was written solely with the thought of imparting a clear idea of the principles of flight, together with such other practical information as can be applied readily by the man in the shop or in the air. The text is based primarily upon lectures given at the U.S. Army School of Military Aeronautics, Ohio State University. The Technical Publications Department at McCook Field, however, has rearranged, reclassified and rewritten a great deal of the text matter contained in these lectures in order to make the book as clear and instructive as possible. Some of...
